

STACKING DEVICE FOR  
THERMOPLASTIC CONTAINERS  
AND/OR LIDS

Abstract of the Disclosure

5           A stacking device includes a main member, at least one support member extending  
from the main member and having a first interference fit with a container, and at least one  
wall member extending from the support member and having a second interference fit  
with the container. The first interference fit is capable of resisting relative movement of  
the stacking device and the container in a first direction and the second interference fit is  
10 capable of resisting relative movement of the stacking device and container in a second  
direction transverse to the first direction.
